

WATERPARK STRUCTURES

Triodetic's innovative **Tornados** are the latest amusement park success story, with over 20 new installations in 2005, from hurricane zones in Florida, to seismic zones in California, to heavy snow belts in Wisconsin, and internationally as far a-field as Australia.

The **Tornado** won for Ottawa based Waterslide specialist, Proslide, the International best new amusement park ride, eclipsing roller-coasters for the first time. "This 70 ft high ride is proving to be an anchor attraction for park operators. It offers an endless variety of ride experience for rafters. Northern installations are supplied with a transparent dome enclosure to allow continuous use through winter."
